

**WASTEWATER EQUIVALENT RESIDENTIAL UNIT DETERMINATION**  
**(ERU = 270 GPD)**

Information presented below is subject to revision based upon passage, revision or amendment to any applicable City of Mascotte ordinance or resolution. The City of Mascotte will, by ordinance or resolution, specify the current wastewater capital charge per Equivalent Residential Unit (E.R.U.). For the purpose of calculating and imposing the wastewater capital charge, and for the purpose of calculating the average wastewater flow, the ERU factor for any particular connection shall be calculated and imposed in the following manner:

<b>Establishment</b>	<b>Unit</b>	<b>Factor</b>
Residential	Per Dwelling Unit	1.000

**GENERAL NOTES**

1. ONE (1) equivalent residential unit (ERU) shall, for the purposes of this Section, have an assigned value of 1.000. One (1) ERU is hereby established and determined to be equal to a flow of two hundred seventy (270) gallons per day (GPD). The "total equivalent residential unit value" for an establishment shall be calculated by multiplying the ERU factor listed above times the number of units.
2. For all establishments not listed above, the total equivalent residential unit (ERU) value shall be determined by multiplying the number of fixture units, as published in the Standard Plumbing Code, by twenty-five (25), and then dividing that numerator by two hundred seventy (270). For example:

$$\text{Total ERU Value} = \frac{\text{Number of Fixture Units} \times 25}{270}$$

The wastewater capital charge shall be determined by using the following formula:

$$\text{Total ERU Value} \times (\text{Current Cost per ERU}) = \text{Wastewater Capital Charge}$$

In no event shall the total ERU value used to calculate a wastewater capital charge for any separate establishment be less than 1.000.
