

# You *Can* Make a Difference!

Prevent pollutants from entering our waterways at your **food service facility** by following the guidelines listed below:

- ◆ Pour all wash water from cleaning into the utility sink or wash sink. Never pour wash water down the storm drain.
- ◆ Keep the lid to the dumpster closed so that rain can't get in and leak out as garbage juice.
- ◆ Sweep around the dumpster daily and inspect for leaks.
- ◆ Dispose of grease or oil properly. Never dump down the storm drain or sanitary sewer.
- ◆ Keep lids closed on tallow bins and keep the area clean.
- ◆ Clean mops, mats, oily vents, trash cans, etc. in the utility sink or designated wash area. Never let this wash water flow down the storm drain.
- ◆ Never hose down a spill. Use dry clean-up methods for spills and keep absorbent materials handy. (e.g. dry mops, paper towels, kitty litter, etc.)
- ◆ Keep cleaning materials out of the rain and place in a covered area that is designed to prevent runoff.
