

## Sidewalk Maintenance Program

The City of Mascotte initiated a sidewalk maintenance pilot program in August 2022 to maintain safe, ADA-compliant sidewalks for residents and visitors. The contractor was instructed to make all repairable changes in level measuring  $\frac{1}{4}$ " to 2" in height using a 1:12 slope to meet ADA requirements. The program allows the City to minimize liability and improve the safety and aesthetics of its sidewalks, while saving the taxpayer residents money when compared to alternative methods. Since inception, the City's contractor has corrected 10.74 miles of sidewalk in five neighborhoods all while saving taxpayers over \$88,000 when compared to other maintenance methods.

This method allows the City to keep the sidewalks in service and minimize inconvenience to pedestrians. No heavy equipment or traffic control is required for the process and all areas are left debris and hazard free.

Each year City Council provides staff with funds to maintain sidewalks in the City and it is our desire to provide the citizens with the best product at the best cost.
